MODEL

210-02 (Full Internal Port)

610-02

(Reduced Internal Port) Altitude Valve For Two-Way Flow with Delayed Opening

Schematic Diagram

Item Description

- 1 Hytrol (Main Valve)
- 2 **CDS6** Altitude Control
- 3 X101 Valve Position Indicator
- 4 **Bell Reducer**
- 5 X58A Restriction Assembly
- 6 CSC Swing Check Valve
- 7 **CVC Flow Check Control**
- 8 CV Flow Control (Closing)

Optional Features

Item Description

- X46A Flow Clean Strainer А
- В CK2 (Isolation Valve)
- S CV Flow Control (Opening)
- X43 "Y" Strainer γ

Typical Applications

Used on reservoirs where water is supplied and withdrawn through the altitude valve. The valve closes at the high water level. When pressure at the valve inlet lowers to the desired opening point, the pilot control opens the main valve for return flow to the system. The return flow pressure setting is adjustable to 6 psi below the shut-off pressure. For more information see data sheet E-CDS6.

*Note: The reservoir pressure sensing line should be 3/4" minimum I.D. installed with a 2° slope from the valve to the reservoir slope to avoid air pockets.

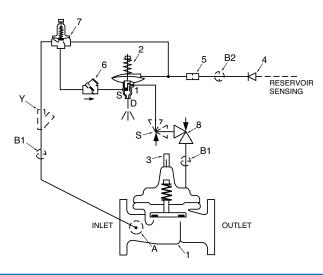

Note: We recommend protecting tubing and valve from freezing temperatures

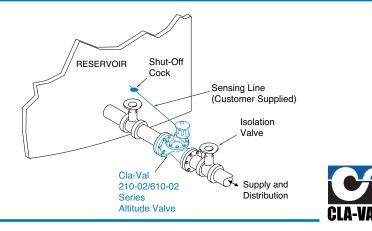

- Accurate and Repeatable Level Control
- **Drip-Tight Positive Shut-Off**
- **Reliable Hydraulic Operation**
- **Easily Adjustable Control** •
- **Completely Automatic Operation**

The Cla-Val Model 210-02/610-02 Altitude Valve controls the high water level in reservoirs without the need for floats or other devices. It is a non-throttling valve that remains fully open until the shut-off point is reached. This valve closes at the high water level, and for return flow, delays its opening until the pressure at the valve inlet lowers to a preset adjustable pressure of one to seven pounds.

This valve is hydraulically operated and pilot controlled. The pilot control operates on the differential in forces between a spring load and the water level in the reservoir. When the force of the spring is overcome by the force of the reservoir head, the pilot closes the main valve. The desired high water level is set by adjusting the spring force. The pilot control measures the reservoir head through a customer supplied sensing line* connected directly to the reservoir.

This valve can also be furnished with auxiliary controls to meet the need for multiple functions, such as: pressure sustaining, pressure reduction, rate of flow control, solenoid override, etc.

610-02 is the reduced internal port size version of the 210-02.

For 100-01 basic valves, suggested flow calculations were based on flow through Schedule 40 Pipe. Maximum continuous flow is approx. 20 ft/sec (6.1 meters/sec) & maximum intermittent is approx. 25 ft /sec (7.6 meters/sec). For 100-20 basic valves, suggested flow calculations were based on flow through the valve seat. Approx. 26 ft/sec (7.9 meters/sec) is used for maximum continuous flow. Maximum continuous flow through the valve seat for the valve seat for the 30" 100-20 is approx. 20 ft/sec (6.1 meters/sec). **Flanged End Detail Only

Pilot System Specifications

Adjustment Ranges

5 - 40 ft. 30 - 80 ft. 70 - 120 ft. 110 - 160 ft. 150 - 200 ft.

Temperature Range

Water: to 180°F

If flowing line pressure is less than 10 psi, consult factory for full details. If inlet pressure is above 150 psi, consult factory for recommendations.

Materials

Standard Pilot System Materials Pilot Control: Bronze ASTM B62 Trim: Stainless Steel Type 303 Rubber: Buna-N[®] Synthetic Rubber

Optional Pilot System Materials

Pilot Systems are available with optional Aluminum, Stainless Steel or Monel materials at additional cost. Valve position indicator is standard.

When Ordering, Please Specify

- 1. Catalog No. 210-02 or No. 610-02
- 2. Valve Size
- 3. Pattern Globe or Angle
- 4. Pressure Class
- 5. Threaded or Flanged
- 6. Materials Desired
- 7. Adjustment Range
- 8. Desired Options
- 9. When Vertically Installed
