Mueller Steam Specialty™

Mueller Steam Specialty began as a small specialty manufacturer servicing the valve industry, and incorporated in 1956 to start manufacturing pipeline strainers. Today, in addition to a full range of pipeline and specialty strainers, the company manufactures a broad offering of check valves and butterfly valves.

Mueller Strainers are used to strain foreign matter from connected pipeline systems and provide economical protection for costly pumps, meters, valves, and other similar mechanical equipment.

Model 41T Tee Strainer

Tee Strainers are available in many performance classes and material construction.

Mueller Y Strainers mechanically remove solids from flowing steam, gases, or liquid piping systems with the use of a perforated or wire mesh straining screen.

Model LF351 Y Strainer

Turbine Meter Strainers are used extensively to protect displacement water meters and other sensitive fluid monitoring devices

Basket strainers are used in applications that require a strainer with an extremely large capacity:

- **Simplex basket strainers:** Model 125-SS is designed for chemical processes applications including brine, paint, fuel oil, organic and inorganic chemicals, condensers, heat exchangers, and other similar applications.
- **Duplex basket strainers:** Duplex basket strainers are suitable for continuous flow applications where the process cannot be shut down for cleaning such as cooling water, compressors, condensers, fire lines, fuel lines, and chemical process systems.

Butterfly Valves are designed for a variety of general applications for controlling liquids, gases, and slurries. Wafer and lug butterfly valves are offered in a range of sizes, performance ratings, and actuation options.
