

## Single Valve PowerStation™ Supply Fixture Capacity up to 208 gpm @ 45psi

### Product Specification

# LEAD FREE\*

#### Features ■

- Features Lead Free\* construction to comply with Lead Free\* installation requirements.
- Paraffin-based advance thermal actuation technology to sense and adjust outlet temperature
- Dirt and lime resistant poppet and seat design
- Virtual shutoff if supply pressure fails
- Vandal-resistant locking mechanism to secure temperature setting
- Mounted on heavy-duty welded struts and factory tested as a complete unit
- Includes Pressure/Temperature Gauges, Ball valves
- Internal bypass loop for quick & easy set-up

#### Specifications ■

Connections .....	See ordering information
Maximum Operating Pressure .....	125psi (861 kPa)
Maximum Hot Water Temperature .....	200°F (93°C)
Minimum Hot Water Supply Temperature** .....	5°F (3°C) above set point
Hot Water Inlet Temperature Range .....	120 – 180°F (49 – 82°C)
Cold Water Inlet Temperature Range .....	40 – 80°F (4 – 27°C)
Minimum Flow*** .....	0.5 gpm (1.89 lpm)
Temperature Adjustment Range**** .....	90 – 160°F (32 – 71°C)
Listing/Compliance–Valve Only .....	ASSE 1017, CSA B125

Advanced Thermal Activation

\* The wetted surface of this product contacted by consumable water contains less than one quarter of one percent (0.25%) of lead by weight.

\*\* With equal pressure

\*\*\* Minimum flow when HiLo valve is installed at or near hot water source recirculating tempered water with a properly sized continuously operating recirculating pump

\*\*\*\* Note: Low limit cannot be less than the cold water temperature. For best operation, hot water should be at least 5°F (3°C) above desired set point.

#### Capacity ■

Flow Capacity at 50-50 Mixed Ratio								
Model	Min. Flow to ASSE 1017	C <sub>v</sub>	Pressure Drop Across Valve

\* If the pump is not selected or if you are using Automatic Balancing Valve (ABV) you must provide the following:

System Head Loss \_\_\_\_\_

Required Flow to Maintain Recirculating Temperature \_\_\_\_\_

## Recirculation Piping Diagram ■

Please see Piping Diagram Section of this catalog.

## Typical Specification ■

Water temperature control system should include a thermostatic mixing valve capable of maintaining water temperature to 5°F (3°C) above set point within the range of 90°F to 160°F (32 to 71°C). Valve must compensate for temperature fluctuation due to inlet temperature or pressure changes. The valves shall be constructed using Lead Free\* brass. Lead Free\* brass valves shall comply with state codes and standards, where applicable, requiring reduced lead content. Valve should have triple-duty checkstops and must have an advanced, paraffin-based thermal actuator in order to guarantee a precise control when tested in accordance with ASSE 1017 and CSA B125.

Control system should be mounted on a heavy-duty welded strut with corrosion resistance coating and factory tested as a complete unit. System should include an internal bypass loop for fast and easy set up. It should also include GFCI protection engineer specified circulator and combination temperature/pressure gauges. The system should feature optional Aquastat and Automatic Balancing valve to maintain system balance.

The control system shall be a Power's PowerStation™ series PSLF. Any alternate must have a written approval prior to bidding.
