

What makes the Flex-Pro™ stand out from the competition?

Fifty years of innovation.

Precise Engineered Rollers
Two CNC machined squeeze rollers and two alignment rollers for optimum squeeze, unparalleled accuracy, and tube life

Easy Access
Toolless, easy to remove pumphead cover requiring no tools

Innovative Rotor Design
Pump can handle the same maximum pressure in either direction (clockwise and counter clockwise).

Shaft Support
Precision SS ball bearings support the front and back of the rotor shaft. Increases accuracy and dependability under continuous duty and extreme pressure

Heavy Duty Rotor
Single piece plastic rotor design means no flexing and increased accuracy (no metal springs or hinges to corrode).

Tube Failure Detection
Detects tubing failure with no false triggering.

Chemical Resistant Fittings
Natural PVDF for optimum chemical resistance and fluid purity.

Pump Head Cover
Clear acrylic, annealed for added strength and chemical resistance

ProSeries™
by Blue-White Ind.

TFD system
Tube Failure Detection
